

Safety Collaboration 2026: Building Confidence in In-Home Planning

The goal of the 2026 Safety Collaboration is to build confidence in in-home planning and strengthen decision-making skills of Child Welfare (CW) supervisors and staff. This will be accomplished through a shared learning model including supervisor and staff sessions. The learning experience will be guided by WCWPDS trainers and DCF staff while relying heavily on attendee participation as the primary source of content expertise and encouraging participants to lean on one another's experiences to build confidence and strengthen practice. This opportunity will allow for open discussion on current practice and experiences working with families.

Target Audience

Each topic will include two sessions: one for Child Welfare Supervisors to connect with peers on supporting their workforce during in-home planning and safety decision making, and a second session for all Child Welfare Professionals to explore effective approaches for working with families. Both sessions center on shared learning, conversation, and practical insight.
